

AngelSense

AngelSense is a next generation analytic-based GPS and voice monitoring solution designed for children with special needs. It offers parents peace of mind through continuous monitoring and notifications on the location of their child. The AngelSense Guardian GPS device transmits data to the AngelSense analytic server that is hosted in the cloud (on Amazon servers). The application, which can be run from any modern internet browser or installed from Google or iOS stores, retrieves the data from the analytic server and presents it to the user. The user can then:

- See their child's [routes & locations](#) at a glance, all day
- Know their child is [not where they're supposed to be](#)
- [Listen-In](#) and/or [call](#) to check on their child's well-being or help them through transition. (The device does not record.)
- Coordinate with the school through the [School Dashboard](#)
- Get expert customer support from a community of special needs moms
- In case of emergency:
 - Track and locate their child as quickly as possible with the [Runner Mode feature](#)
 - Send out a search party at a click of a button with the [First Responders feature](#)

The device is secured to clothing with magnetic fasteners that cannot be removed, ensuring that the child keeps the device on, and offers a variety of [accessories](#) that can help specifically when dealing with children with high sensory sensitivity.
